

Seal Bipack

SEALBIPACK

Becher mit perfektem Siegelrand; frisch, sicher, haltbarer. Mit Top Siegelfolienlösung für eine sichere Barriere gegen Kontamination.

Our Seal Bipack range includes a variety of sealable cups from 125 ml to 1,000 ml with matching separate lids. The sealing cups are developed from a wide variety of materials for all possible filling goods. Important in the development was a perfect sealing edge and a material distribution in the cup edge, cup wall and cup bottom that is suitable for filling machines.

The cups are made either from mono materials such as polypropylene, polystyrene, PET and RPET or from a multi-layer barrier film PP-EVOH-PP.

The sealing cups are suitable for all imaginable filling goods.

In the food retail markets, you will find yoghurts, cream cheese, quark, fine food and even anti-pasti products filled in our sealing cups.

Our sealing cup lids have been specially developed for high-speed filling machines. The lid bars can therefore be easily inserted into the stacking device of the filling machines.

The Seal Bipack products are of course recyclable.

We also have sealing film solutions for our sealing cups.

If you have any questions about the sealing films, please contact us.
