

Classic Bipack

Wächter & Co began manufacturing plastic packaging over 60 years ago.

Our customers' requirements have always been our top priority.

Our **Classic Bipack** series encompasses all standard packaging types for everyday use.

This segment covers every conceivable packaging option our customers need for daily operations- ranging from standard rectangular containers to injection-molded cups with tamper-evident closures.

The range includes everything from thermoformed rectangular containers to tamper-evident tubs.

A key highlight is that Wächter & Co offers printing services for all items compatible with our cup and lid printing machines, available in very manageable order quantities.

You can find more information in the **Bipack Druck** section.

Das **Classic Bipack** range is constantly being innovated and expanded. For instance, we recently developed the "Klara one touch" hinged container for the salad and antipasti industry. In developing this product, we re-examined every aspect of the process, from food industry production workflows to every step of handling, filling, and delivery to food retailers and designed it from scratch with a focus on sustainability.

You can find the result on page 51 of the catalog.

In general, all items in the **Classic Bipack** range are:

Recyclebar

Available with up to 80% recycled content

Available with custom printing on almost all items

BRCS certified
