BIOBIPACK

Neu bei uns: Nachhaltige Lebensmittel-
verpackungen aus FSC® Kraftpapier
und recyclebarem PET

You might ask yourself: how does that fit together? A plastic packaging manufacturer and kraft paper items additionally BRCGS certified. The answers to this are relatively simple: our customers asked Wächter & Co to be a partner for this product group and we were looking for more environmentally friendly items and implemented them in our portfolio. As result we deliver now our customers with amazing natural aesthetically items.

It was a very long process to find the right production partner for us.
A producer that meets the requirements of BRCGS and also flexible enough
to suit our customers and therefore us in every aspect.

We tested all the items ourselves for 3 months.
Any deviation from our quality standards was a knockout criterion for a supplier

A small example of the tests: We filled rectangular cups with meat and potato salad and kept them in the refrigerator for 9 days. If the outer wall turned dark or moisture came out of the cup, the products and thus the producer were dismissed. Of course, we also carried out tests with other filling goods such as fresh salads. The kraft paper packaging were also sent to our local laboratories for migration tests. Product safety is our top priority!

Our **BioBipack** range includes bowls and cups made of kraft paper with PE coating.
The separately packed lids are recyclable from PET, PP and kraft paper.
They are the perfect solution for sustainability, functionality and safety of your products.
Made from strong, high-quality FSC certified kraft paper, easy to use and store.
